Graduation season is among us, which means it’s time to celebrate the students who worked –and the parents who saved–their way to graduation day. Funding college is a team effort. College savings plan contributions should happen early, often, and with a little help from friends and family.

If you need a present for your little loved one, consider the gift that keeps on giving: a college savings plan contribution. Call the office for more info!

Speaking of little ones, I wouldn’t be a proud “Paw” if I didn’t announce that my son John and daughter-in-law Kerri are expecting their second child! JT has already settled into his big brother responsibilities, and is recommending a second 529 plan…

Summer 2017

Alternatives to Long-Term Care Insurance

The costs of long-term care can be overwhelming, potentially exhausting retirement income and savings. You may be thinking about buying long-term care insurance (LTCI) to help cover some of the potential costs of long-term care, but LTCI can be expensive, and if you do buy the coverage, you probably hope you never have to use it. A complete statement of coverage, including exclusions, exceptions, and limitations, is found only in the LTC policy. It should be noted that carriers have the discretion to raise their rates and remove their products from the marketplace.

The prospect of paying costly premiums for LTCI that you may never use might not appeal to you. But there are alternatives worth considering.

Self-insure

You could use your personal savings and retirement income to pay for long-term care expenses (self-insurance). While this option may be appealing, there may be some drawbacks. Depending on the type of long-term care, where that care is provided, and for how long, it's possible that you could run out of savings while still needing care. Also, using your own savings and income for long-term care costs may affect the financial well-being of a spouse or other dependents. And you may not have anything left to pass on to your heirs when you die.

Life insurance to pay for long-term care

One of the risks of buying LTCI is that you may spend thousands of dollars in premiums and never use the insurance. As an alternative, you may be able to use life insurance to help pay for long-term care expenses. For instance, some insurers offer policies that combine long-term care insurance with permanent life insurance. While these "combination" policies may differ, they generally offer a pool of money that can be used to pay monthly expenses associated with long-term care. If you don't use the policy for long-term care, then it will pay a death benefit to your designated beneficiaries if the policy is in force at your death.

Alternatively, you might be able to add an acceleration rider to your life insurance policy that will allow you to tap into (accelerate) your death benefit for long-term care expenses. Again, if you don't use the death benefit for long-term care costs, the policy will pay the death benefit to the beneficiaries you name in the policy. In any case, before buying a policy, you should have a need for life insurance and you should evaluate the policy on its merits as life insurance. Optional benefit riders are available for an additional fee and are subject to contractual terms, conditions, and limitations as outlined in the policy and may not benefit all investors. Any payments used for covered long-term care expenses would reduce (and are limited to) the death benefit and can be much less than those of a typical long-term care policy. Any guarantees are contingent on the financial strength and claims-paying ability of the issuing insurance company.

Medicaid

Medicaid is a joint federal and state government program that helps people with low income and assets pay for some or all of their health-care bills, including some costs associated with long-term care. Qualifying for Medicaid and covered services is based on federal requirements and eligibility rules, which vary from state to state. Generally, to be eligible for Medicaid, you must meet certain preconditions, which include income and asset levels that meet your state's eligibility requirements. You may need to exhaust your savings to qualify for Medicaid. Once the state determines that you're eligible for Medicaid, the state will make an additional determination of whether you qualify for long-term care services, based on whether you need assistance with personal care and other service needs, such as eating, bathing, dressing, toileting, and transferring (to or from a bed or chair).

Infographic: 4 Things to Do in the 4 Years Before College

College is a huge financial undertaking. With costs increasing every year and the prospect of too much student debt at the forefront of many families' minds, it's more important than ever to be an educated college consumer. Go into the planning process wisely with these four steps.

1

Take stock of your savings

A few years before you need to start paying tuition bills is a good time to look at your college savings. How much have you saved? Are you currently making monthly contributions? Can you increase them? How much will you have saved by the time your child graduates from high school?

Get familiar with financial aid...

Get an estimate of your expected family contribution (EFC) by filling out the federal government's FAFSA4caster tool at www.fafsa.ed.gov. Your EFC will depend on your family's income, assets, and household information, like the number of children you'll have in college at the same time.

2

3

... and net price calculators

Colleges differ in the amount of merit and need-based financial aid they offer. To get an idea of how generous a college is, run the net price calculator available on every college website to get an estimate of what your out-of-pocket costs will be at that college. This 10-minute endeavor can help you compare the cost of different colleges in an apples-to-apples way.

Have a frank conversation with your child about college costs

Share how much you expect to have saved and how much you will be able to contribute each year during college. When talking about loans, make sure your child knows exactly what the monthly payment will be after graduation for different loan amounts. Help your child avoid excessive borrowing.

4

Student Loan Debt: It Isn't Just for Millennials

It's no secret that today's college graduates face record amounts of debt. Approximately 68% of the graduating class of 2015 had student loan debt, with an average debt of $30,100 per borrower — a 4% increase from 2014 graduates.[1]

A student loan debt clock at finaid.org estimates current outstanding student loan debt — including both federal and private student loans — at over $1.4 trillion. But it's not just millennials who are racking up this debt. According to the Consumer Financial Protection Bureau (CFPB), although most student loan borrowers are young adults between the ages of 18 and 39, consumers age 60 and older are the fastest-growing segment of the student loan market.[2]

Rise of student debt among older Americans

Between 2005 and 2015, the number of individuals age 60 and older with student loan debt quadrupled from about 700,000 to 2.8 million. The average amount of student loan debt owed by these older borrowers also increased from $12,100 to $23,500 over this period.[3]

The reason for this trend is twofold: Borrowers are carrying their own student loan debt later in life (27% of cases), and they are taking out loans to finance their children's and grandchildren's college education (73% of cases), either directly or by co-signing a loan with the student as the primary borrower.[4] Under the federal government's Direct Stafford Loan program, the maximum amount that undergraduate students can borrow over four years is $27,000 — an amount that is often inadequate to meet the full cost of college. This limit causes many parents to turn to private student loans, which generally require a co-signer or co-borrower, who is then held responsible for repaying the loan along with the student, who is the primary borrower. The CFPB estimates that 57% of all individuals who are co-signers are age 55 and older.[5]

What's at stake

The increasing student loan debt burden of older Americans has serious implications for their financial security. In 2015, 37% of federal student loan borrowers age 65 and older were in default on their loans.[6] Unfortunately for these individuals, federal student loans generally cannot be discharged in bankruptcy, and Uncle Sam can and will get its money — the government is authorized to withhold a portion of a borrower's tax refund or Social Security benefits to collect on the debt. (By contrast, private student loan lenders cannot intercept tax refunds or Social Security benefits to collect any amounts owed to them.)

The CFPB also found that older Americans with student loans (federal or private) have saved less for retirement and often forgo necessary medical care at a higher rate than individuals without student loans.[7] It all adds up to a tough situation for older Americans, whose income stream is typically ramping down, not up, unlike their younger counterparts.

Think before you borrow

Since the majority of older Americans are incurring student loan debt to finance a child's or grandchild's college education, how much is too much to borrow? It's different for every family, but one general guideline is that a student's overall debt shouldn't be more than his or her projected annual starting salary, which in turn often depends on the student's major and job prospects. But this is just a guideline. Many variables can impact a borrower's ability to pay back loans, and many families have been burned by borrowing amounts that may have seemed reasonable at first glance but now, in reality, are not.

A recent survey found that 57% of millennials regret how much they borrowed for college.[8] This doesn't mean they regretted going to college or borrowing at all, but it suggests that it would be wise to carefully consider the amount of any loans you or your child take out for college. Establish a conservative borrowing amount, and then try to borrow even less.

If the numbers don't add up, students can reduce the cost of college by choosing a less expensive school, living at home or becoming a resident assistant (RA) to save on room costs, or graduating in three years instead of four.

The intersection of student loan debt and Social Security benefits

Since 2001, the federal government has collected about $1.1 billion from Social Security recipients to cover unpaid federal student loans, including $171 million in 2015 alone. During that time, the number of Americans age 50 and older who have had their Social Security benefits reduced to pay defaulted federal student loans has risen 440%.

Are you ready to retire?

Here are some questions to ask yourself when deciding whether or not you are ready to retire.

Is your nest egg adequate?

It may be obvious, but the earlier you retire, the less time you'll have to save, and the more years you'll be living off your retirement savings. The average American can expect to live past age 78.* With future medical advances likely, it's not unreasonable to assume that life expectancy will continue to increase. Is your nest egg large enough to fund 20 or more years of retirement?

When will you begin receiving Social Security benefits?

You can receive Social Security retirement benefits as early as age 62. However, your benefit may be 25% to 30% less than if you waited until full retirement age (66 to 67, depending on the year you were born).

How will retirement affect your IRAs and employer retirement plans?

The longer you delay retirement, the longer you can build up tax-deferred funds in traditional IRAs and potentially tax-free funds in Roth IRAs. Remember that you need taxable compensation to contribute to an IRA.

You'll also have a longer period of time to contribute to employer-sponsored plans like 401(k)s — and to receive any employer match or other contributions. (If you retire early, you may forfeit any employer contributions in which you're not fully vested.)

Will you need health insurance?

Keep in mind that Medicare generally doesn't start until you're 65. Does your employer provide post-retirement medical benefits? Are you eligible for the coverage if you retire early? If not, you may have to look into COBRA or an individual policy from a private insurer or the health insurance marketplace — which could be an expensive proposition.

Is phasing into retirement right for you?

Retirement need not be an all-or-nothing affair. If you're not quite ready, financially or psychologically, for full retirement, consider downshifting from full-time to part-time employment. This will allow you to retain a source of income and remain active and productive.

Do I need to file a gift tax return?

If you transfer money or property to anyone in any year without receiving something of at least equal value in return, you may need to file a federal gift tax return (Form 709) by the April tax filing deadline. If you live in one of the few states that also impose a gift tax, you may need to file a separate gift tax return with your state as well.

Not all gifts, however, are treated the same. Some gifts aren't taxable and generally don't require a gift tax return. These exceptions include:

- Gifts to your spouse that qualify for the marital deduction
- Gifts to charities that qualify for the charitable deduction (Filing is not required as long as you transfer your entire interest in the property to qualifying charities. However, if you are required to file a return to report gifts to noncharitable beneficiaries, all charitable gifts must be reported as well.)
- Qualified amounts paid on someone else's behalf directly to an educational institution for tuition or to a provider for medical care
- Annual exclusion gifts totaling $14,000 or less for the year to any one individual (However, you must file a return to split gifts with your spouse if you want all gifts made by either spouse during the year treated as made one-half by each spouse — enabling you and your spouse to effectively use each other's annual exclusion.)

If your gift isn't exempt from taxation, you'll need to file a gift tax return. But that doesn't mean you have to pay gift tax. Generally, each taxpayer is allowed to make taxable gifts totaling $5,490,000 (in 2017, up from $5,450,000 in 2016) over his or her lifetime before paying any gift tax. Filing the gift tax return helps the IRS keep a running tab on the taxable gifts you have made and the amount of the lifetime exclusion you have used.

If you made a gift of property that's hard to value (e.g., real estate), you may want to report the gift, even if you're not required to do so, in order to establish the gift's taxable value. If you do, the IRS generally has only three years to challenge the gift's value. If you don't report the gift, the IRS can dispute the value of your gift at any time in the future.
